

SeQent: Real-Time Decision Solutions

Proactively monitor industrial systems and dispatch key alarms to communication devices such as Zebra Workforce Connect.

SeQent's software bridge allows you to receive crucial information from your factory floor in the palm of your hand. Get alarms and event notifications sent to your device, learn about equipment problems before they happen, and respond to emergencies quickly. With SeQent and Zebra, you maintain real-time plant connectivity through a user-friendly platform.

FirstPAGE™

SeQent's *FirstPAGE* is an automated messaging platform that empowers you to send messages either manually or automatically to everyone in your organization at once.

FirstPAGE is capable of sending thousands of messages per hour in near real-time. Your team receives messages on whatever connected devices they use, including mobile computers, two-way radios, smartphones with Workforce Connect clients, and PA systems. *FirstPAGE* offers an impressive set of features:

- Message delivery to a wide range of devices
- Support for any national service provider or any in-house paging system
- Distributed architecture supporting an unlimited number of providers, destinations, and distribution lists
- Data publication in near real-time from multiple sources
- Support for automated fallback to alternate communication paths to deliver messages to providers
- Support for a wide variety of protocols
- Full suite of administration tools—all accessible remotely

FirstPAGE Alarm Manager™

Get critical alerts with SeQent's *FirstPAGE* Alarm Manager. Alarm Manager sends alerts when alarms are triggered by safety and equipment monitoring systems on your factory floor.

Alarm systems are routed into our *FirstPAGE* Alarm Manager Server. The server executes messaging based on the hierarchy of staff you select, and includes options for repeat messaging as events age, a delay before sending an initial message to ensure the event is not transient, and multiple levels of escalation. Get the critical data alerts you need exactly how you want to receive them with *FirstPAGE* Alarm Manager:

- Manages the entire life cycle of alarms from initiation to termination
- Is easily scalable to thousands of alarms per hour
- Dispatches alarms with a single server from 20+ homogeneous or heterogeneous gateways
- Requires only a source system to report "alarm active" and "alarm inactive" for any alarming event
- Suppresses momentary alarms until a full alarm condition is detected with initial delay feature
- Maps wildcard and specific alarms
- Imports/exports for easy mass configuration and reconfiguration
- Enables real-time embedded alarm values
- Sends messages from multiple applications to the same device
- Interfaces with leading industrial HMI SCADA/data collection companies

Zebra Technologies Workforce Connect

Workforce Connect is a key part of Zebra's broad portfolio of solutions for industries that need connected factories and warehouses. It includes voice calls and immediate communications with co-workers, and is effective for global teams, remote workers, and off-site management. Workforce Connect can streamline workflows and seamlessly connect teams.

FirstPAGE connects to Zebra's Workforce Connect solution, which allows organizations to combine all voice and data communications into one multi-functional mobile computer.

Instead of working with multiple devices, *FirstPAGE* and Workforce Connect allow your team to receive important information about events and alarms on the factory floor on one device:

- Full Redundancy supported
- Detailed text message transaction logging
- End-to-End message traceability

Contact SeQent to Explore the Power of Real-Time Decision Solutions

SeQent has been providing innovative solutions to manufacturers for over two decades, with a global customer base focused around discrete and process manufacturing. Discover why SeQent is the premier choice for your plant-floor messaging and communication needs.
